Windows 7 supports User Account Control (UAC), a security measure that helps protect your PC from potentially malicious applications or code. If you choose, you can enable UAC for the operating system as a whole or for selected individual programs. You can also set permissions on your personal files to make them accessible only to you. With UAC enabled, Windows Seven performs a number of actions automatically when it detects a program that could harm your computer. Windows Seven may also prompt you when it wants permission to make changes to the operating system or files on your hard drive. If you select the default setting, Windows Seven will always grant permission. If you select an option labeled "Don't notify," Windows Seven will allow the program to run only when you specifically give permission. If you select the "Don't Ask Me Again" option, Windows Seven will not ask permission to perform this action. Windows 7 features integrated media playback, which means that certain Windows 7 functions (such as playing video files, listening to music, and sharing photos from your camera) are enabled when you plug in a device. The Win 7 Taskbar, Windows 7 Start menu, and Windows 7 taskbar can be customized. [IMG] [IMG] [IMG] [IMG] [IMG] [IMG] The Windows 7 Desktop can be customized.
